Workshop 2  Assessing Risk

Working in pairs, assess the methods you used in some projects (student or industrial) with which you are familiar.

Did you identify any risks at the start of the project?
Did you take any mitigating action?
What problems actually occurred?
How did you solve or manage those problems?

In terms of our four dimensions {Functionality, Quality, Time, Money}, how did the project conclude?
Was it a success? Where there any estimates of the number of defects in the system at the time of delivery?

Write a short (one page) summary of your projects for the workshop.
After the workshop, make a summary of any useful points you have obtained from listening to other students.
